Economical, Environmental
Wash Water Recirculator

Achieve superior processing results and significant savings with the WS15.

The WS15 processor water recirculation system is one of the many advanced plate-handling solutions offered by NES Worldwide. Call us, or visit our web site at www.nesworldwide.com to learn how our expert staff can help put the right system—at the right price—into your print shop.

Features:

- Small footprint and light weight for convenient placement
- Self-contained, 15 gallon tank requires no direct plumbing access
- 20 micron filter removes particles and effluents
- Easy access for filter change and simple maintenance procedures
- Durable steel construction guarantees long term use
- Made in USA

WORLDWIDE PRESENCE. LOCAL ATTENTION.

Your Partner for Automated Production Solutions

Water access and usage, as well as pollution abatement systems, are expenses that impact the bottom line. Pair your plate processors with an WS15 Water Recirculation System, and keep profits from going down the drain.

With the WS15, wash water is filtered and re-circulated for repeat use, dramatically reducing the amount of water required for operation. And, by reducing the amount of effluents drained, your pollution control systems will be able to work more efficiently, as well.

The highly efficient, self-contained WS15 can be adapted to any plate processor, anywhere – whether or not you have access to a drain or direct water supply. The system's fifteen-gallon tank fits snugly into any prepress or office environment, with a footprint of only 19.5 x 20" (495 x 521 mm).

You'll see the results on press and in your bank account. For convenience, cost-savings and a lower environmental impact, make the WS15 a key element of your plate processing systems.

Installation, Service, Parts, Sales, Refurbishment

The team at NES Worldwide is dedicated to one goal: making your business run smoothly. We offer straightforward, expedient, customized solutions to all of your plate-handling requirements – from new and refurbished equipment, to service, parts and installation.
